WorléeAdd 603

Art.-No. 114007-01790

Revision: 04.03.2014

W'Add 603 is a polyacrylate modified silicone defoamer for the use in solvent based and - free coatings of different composition.

Technical Data:

Appearance	clear to slightly turbid, low viscous liquid
Flash point, DIN EN 22719	approx. 45 °C
Non volatile content, DIN EN ISO 3251	13.5 % ± 1.0

Application and Properties:

W'Add 603 can be used as antifoam agent and defoamer in very different systems. The well-balanced composition improves normally substrate wetting as well as flow at the same time. Application fields are can coatings, airdrying industrial coatings, wood and furniture coatings, solvent free UV-systems as well as EP-coatings.

The optimal addition quantity, calculated on total formulation, is between 0.2 and 1.5% which should be determined by serial tests.

Storage and Shelf Life:

W'Add 603 is delivered in an inflammable solvent, therefore protect from heat and keep away from open flame. In case of correct storage in unopened original containers W'Add 603 can be used min. 12 months from date of delivery.
